- Mechanical Works

Tyre Fitment

Our most modern high-tech showroom offers an array of almost all world class brands of tires for passenger cars, commercial trucks and industrial vehicles. The unique one-stop fitment centre spells convenience and reassurance with all kinds of tire related problems solved with the finest professional attention. The centre is equipped with state-of-the-art equipment for wheel alignment, wheel balancing and tyre changing to ensure long tyre life and safe driving.

Al Zaabi Automotive

Tyre Trading

Al Zaabi Automotive is an UAE based organisation specialising in the import, export and distribution of tyres headquartered in Abu Dhabi holds exclusive and non-exclusive agencies for multiple tyre brands. We are well placed to assist our customers in selecting the right tyre to satisfy their needs and to make the right choice and get back on the road in no time. We are in the tyre trading business for over 20 years supplying off and on road tyres across various market segments including Construction, Agriculture, Material Handling, Mining and Forestry all under one roof.

Being a major player, we identified a huge gap in the earthmoving sector for premium quality OTR tyres, Al Zaabi brands ITR for radial and bias tyres. Our tyres come with manufacturer's guarantee to ensure better value for money. These are some of our key brands, but we also stock many more. We have brands to cover all price ranges from budget to premium. Import, Export & Distribution of Tyres

Tyre Retreading

The company is founded on a strategic vision of being a onestop destination for all tyre needs and is well integrated towards this end. Firmly established as a major retreading facility in the region, Al Zaabi Tyre Factory has pioneered the tyre remanufacturing process in the country.

It is very close to the manufacturing process of a new tyre and therefore ensures top quality for the end product. We produce our retreads in a very modern plant operated by trained engineers and professional retread specialists adhering to stringent industry standards at every step of the retreading process. Our R&D efforts have borne fruit in the development of a new third generation technology for tyre manufacturing for the first time in the UAE known as the Segmented Vulcanized Re-manufacturing Process. Based on an Italian technology this is a reconstructive process that is far superior in terms of product quality and is immensely environment-positive.

Today besides these mainstay activities, we are one of the largest direct importers, exporters and wholesale traders of all leading brands of tyres from Japan, Korea, China and Thailand with an extensive product range that covers passenger car, truck and industrial tyres.

It marks the evolution of what commenced as a retreading company into a fully-fledged 'Total Tyre Solutions Provider' with a one-stop shop convenience for customers. The factory is located at Musaffah, the industrial hub of Abu Dhabi and ranks as one of the most modern manufacturing facilities and service providers in the whole region where we seek possibilities in every opportunity and continuously explore the realms of technical knowledge.

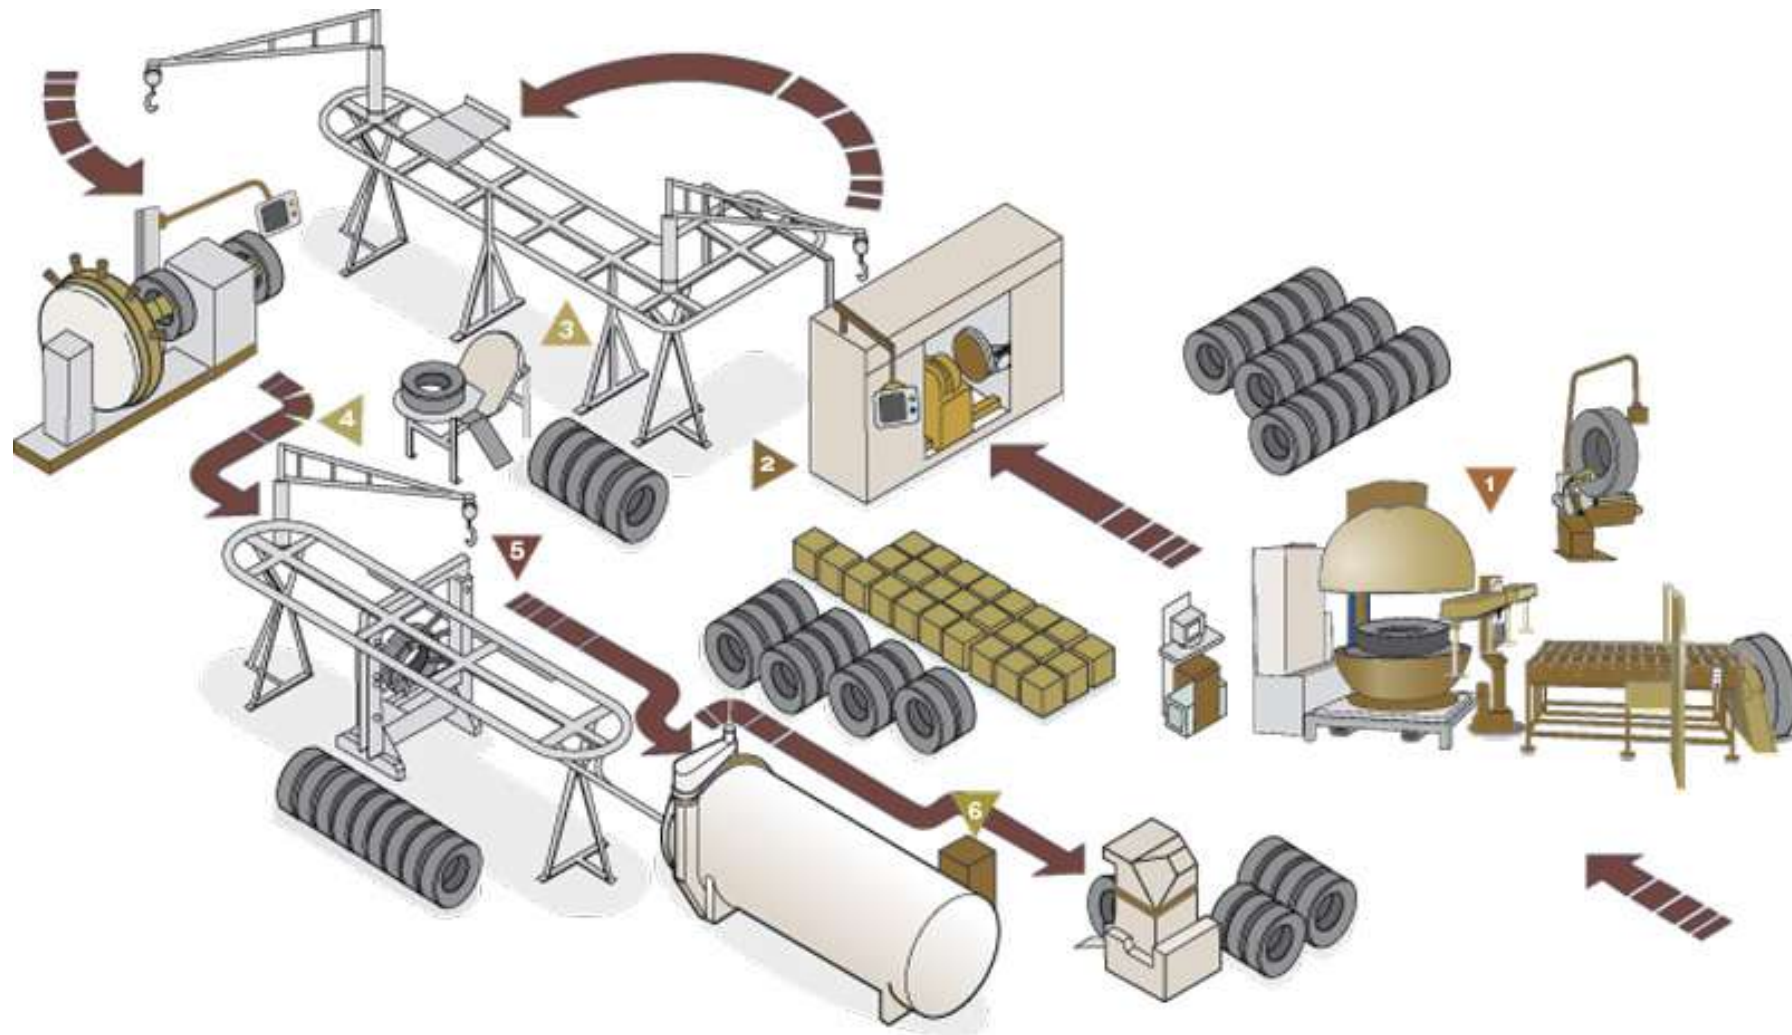

More for Less

More Mileage

More Grip

4. Building

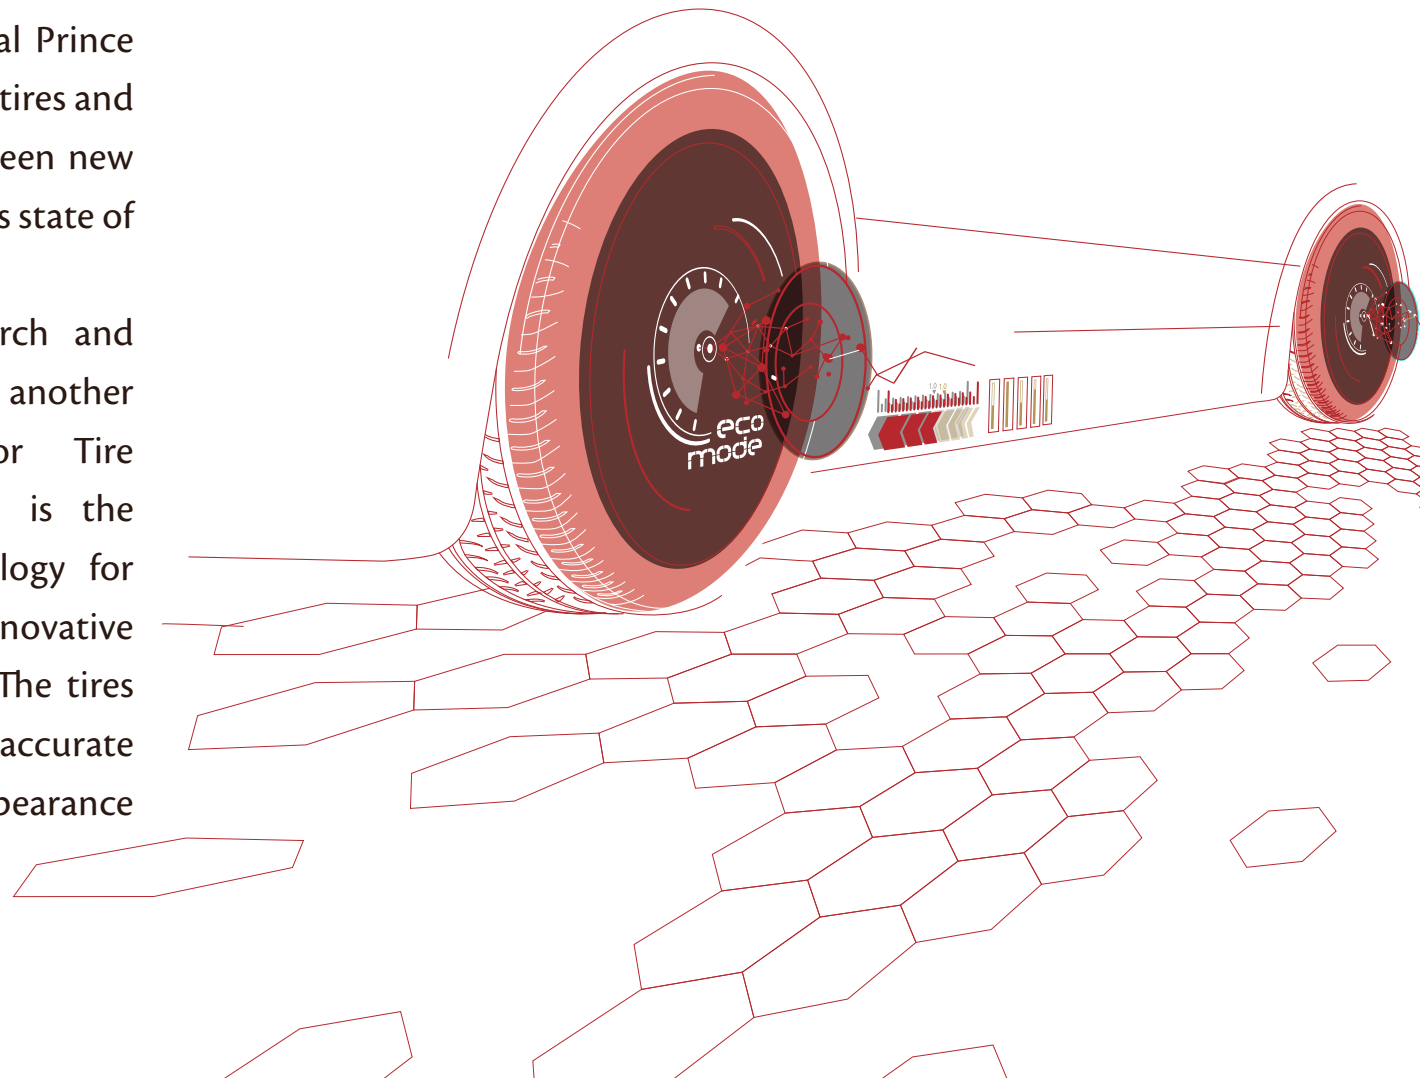

5. Curing

6. QC

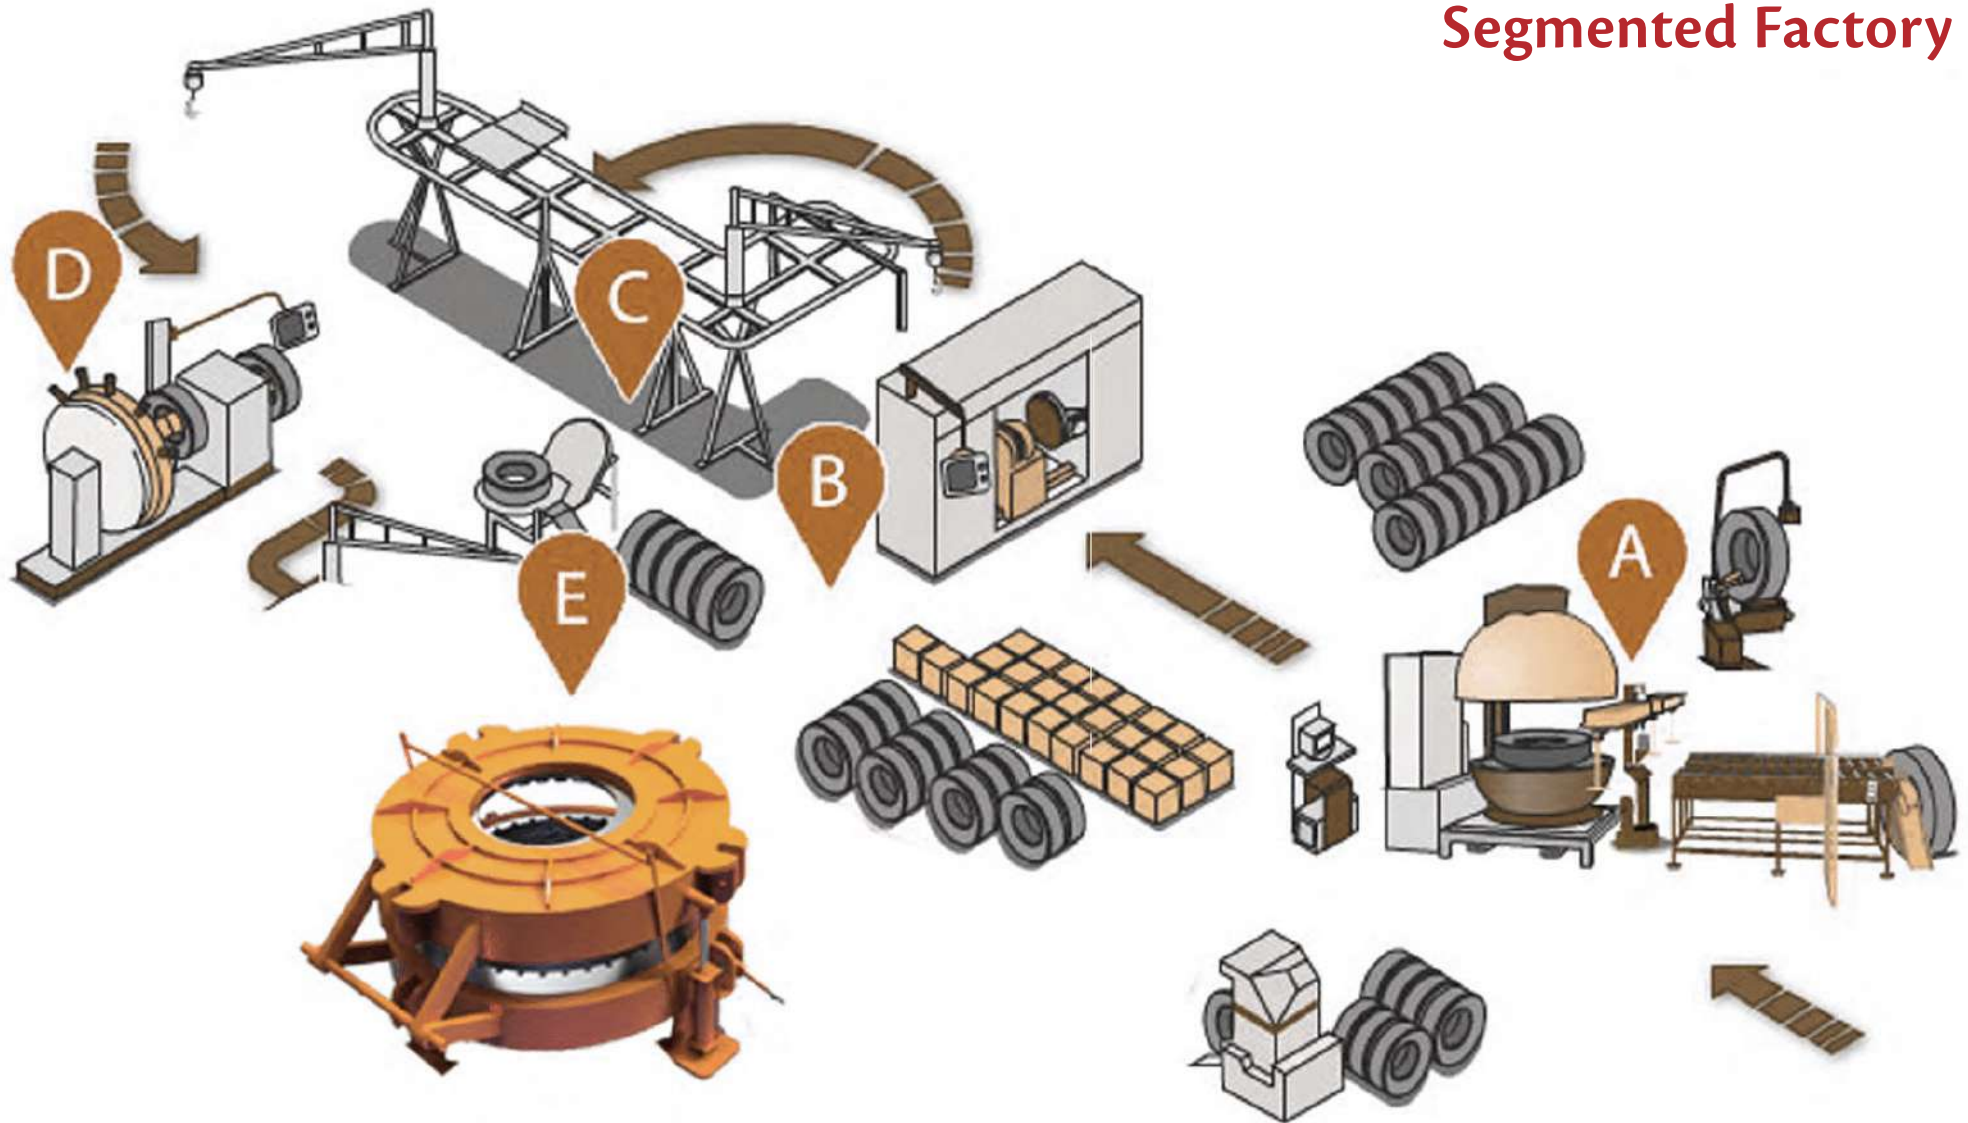

Segmented Tyres

Every remanufactured tires from Royal Prince will be an exact replica of a brand new tires and it is hard to get it differentiated between new and remanufactured tires because of its state of art appeal.

As a result of our nonstop Research and Development, Royal Prince started another factory in 2009 exclusively for Tire Remanufacturing. The new factory is the adoption of 3rd generation technology for remanufacturing tires which is an innovative process and first of its kind in UAE. The tires fashioned by this technology will be accurate reproduction of new tires both in appearance and quality.

Segmented Factory

SEGMENTED TYRES

Our R&D efforts have borne fruit in the Development of a new third generation technology for tyre manufacturing for the first time in the UAE known as the Segmented Vulcanized Re-manufacturing Process. Based on an Italian technology this is a reconstructive process that is far superior in terms of product quality and is immensely environment-positive.

Segmented tyres allows extensive repairs carried out on the tyre carcass

- Greater tyre mileage - 95% of a new tyre.
- Proven rubber technology.
- Range of patterns to suit various application and taste.

Our Technology is Focused on the following key areas:

- Rolling Resistance
- Chip/Chunk Resistance
- Wet Grip
- Mileage
- External Noise

ADVANTAGES & BENEFITS

- As against the earlier conventional process this is performed in a segmented mould and is ideal for radial tyres. The segmented tyre is exactly similar to a new tyre and is hard to differentiate.
 - The technology is superior and similar to new tyre manufacturing. These tyres can withstand the scuffing and abrasion same as brand new tyres and are not prone to the usual problems of the latter such as tread lift, joint separation etc.

ULTRA EFFICIENT TYRES
ARE ON THE WAY
